AI Analyst for Startup Evaluation

An intelligent platform that transforms how early-stage investors evaluate startups through AI-powered analysis and data synthesis.

The Investment Analysis Challenge

Current Reality

Early-stage investors face an overwhelming deluge of unstructured startup data spanning pitch decks, founder calls, email correspondence, and scattered news reports across multiple channels.

Traditional manual analysis is time-consuming, inconsistent across deal teams, and frequently misses critical red flags buried within volumes of information.

What Investors Actually Need

Signal Through Noise

Cut through information overload to surface what truly matters

Analysis at Scale

Evaluate multiple startups efficiently without sacrificing quality

Consistent Standards

Apply trained associate-level rigour across every evaluation

An AI analyst that systematically evaluates startups and generates investor-ready insights – that's the game-changer.

Our Objective

Build an AI-powered analyst that reviews founder materials and public data to create concise, actionable deal notes with clear benchmarks and risk assessments across sectors and geographies.

Platform Capabilities

01
Data Ingestion

Automatically ingest pitch decks, call transcripts, founder updates, and email correspondence to generate structured deal notes with consistent formatting.

02
Sector Benchmarking

Compare startups against sector peers using financial multiples, hiring velocity data, and traction signals for contextual positioning.

03
Risk Flagging

Identify potential warning indicators including inconsistent metrics, inflated market size claims, or unusual churn patterns automatically.

04
Investment Recommendations

Summarise growth potential and generate investor-ready recommendations tailored to customisable evaluation weightings and criteria.

Core Intelligence Features

Automated Synthesis

Transform unstructured founder materials into standardised investment memos within minutes, not days.

Pattern Recognition

Leverage machine learning to spot red flags and opportunities that human analysts might overlook.

Customisable Frameworks

Adapt evaluation criteria to match your fund's specific investment thesis and sector focus.

Powered by Google AI Technologies

Gemini

Advanced language understanding for nuanced analysis of founder narratives and market positioning

Vertex AI

Custom model training and deployment for sector-specific evaluation frameworks

Cloud Vision

Intelligent document processing to extract data from pitch decks and presentations

BigQuery

Powerful data warehousing for benchmarking analysis and historical pattern recognition

Technology Architecture

Input Layer

Firebase handles secure document uploads and real-time data streaming

Processing Core

Agent Builder orchestrates multi-step analysis workflows and model coordination

Output Generation

Structured deal notes with benchmarks, risks, and recommendations

Impact for Investors

10x

Faster Analysis

Reduce deal evaluation time from days to hours with automated synthesis

95%

Consistency Rate

Apply standardised evaluation criteria across every startup review

3x

Deal Flow Capacity

Evaluate significantly more opportunities without expanding team size

Made with GAMMA

Transform Your Investment Process

Stop drowning in unstructured data. Start making faster, more informed investment decisions backed by AI-powered analysis that scales with your ambitions.

Our platform combines the rigour of a trained associate with the speed and consistency only artificial intelligence can deliver – evaluating startups across sectors and geographies with precision.

Ready to revolutionise your deal flow?
